## 2022 Census ACS 5-yr Estimates.

### SOURCES

#### Total Population Table

*Source: U.S. Census Bureau, 2020 Census Redistricting Data (P.L. 94-171) Summary File, Tables P1, P3; U.S. Census Bureau. "Age and Sex." American Community Survey, ACS 5-Year Estimates Subject Tables, Table S0101, 2022*

This profile presents data from the 2020 Census Redistricting File (P.L. 94-171) published by the U.S. Census Bureau. According to the Census Bureau,

Public Law 94-171, enacted in 1975, directs the U.S. Census Bureau to make special preparations to provide redistricting data needed by the 50 states. It specifies that within 1 year following Census Day, the Census Bureau must send the governor and legislative leadership in each state the data they need to redraw districts for the U.S. Congress and state legislatures. To meet this legal requirement, the Census Bureau set up a program that affords state officials an opportunity before each decennial census to define the small areas for which they wish to receive census population totals for redistricting purposes.

#### American Community Survey

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

#### Total Population by Race and Hispanic Origin Table

*Source: U.S. Census Bureau, "Hispanic or Latino Origin by Race." 2018-2022 American Community Survey 5-Year Estimates Table B03002*

Race data are self-identified by people according to the race or races with which they most closely identify. Hispanic persons are people who identify themselves as Hispanic/Latino/Latina or of Spanish origin. People of Hispanic origin may be of any race.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
